Virima SaaS Data Sheet
Discovery, CMDB, and ViVID™ Service Mapping

Virima Highlights

- **Automated CMDB discovery for hybrid IT**
- **Support for off-network PC's and Macs**
- **Visualized CMDB experience**
- **Service mapping automation**

- **Virima Visual Impact Display (ViVID™)**
- **Autonomic Social Discovery™**
- **Bi-directional integration with leading ITSM platforms**
- **Full CMDB schema flexibility**

Virima brings the power of hybrid discovery, full-featured visualized CMDB, service mapping, and the Virima Visual Impact Display (ViVID™) to teams looking to speed up incident resolution, reduce failed changes, and streamline configuration management processes.

Virima redefines how IT teams mitigate inherent risks of making changes to their complex IT environments, respond to outages, and prioritise vulnerabilities. Virima also transforms the way IT teams build, maintain, and operationalise a trustworthy CMDB.

The value of Virima also extends to various facets of IT asset management, cybersecurity, and audit/compliance.

Foundation for IT Success
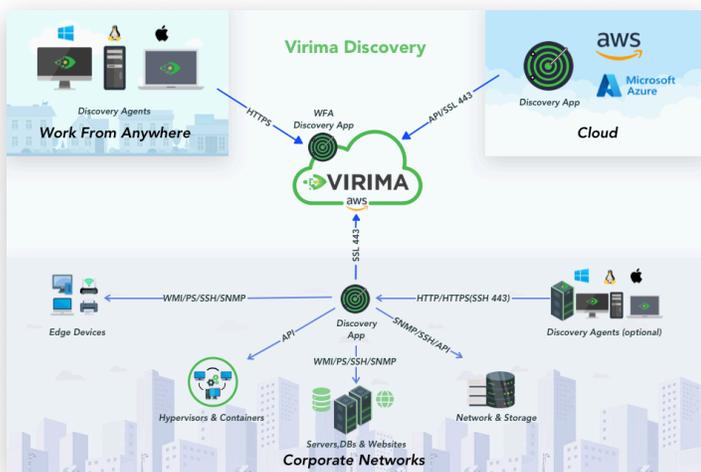

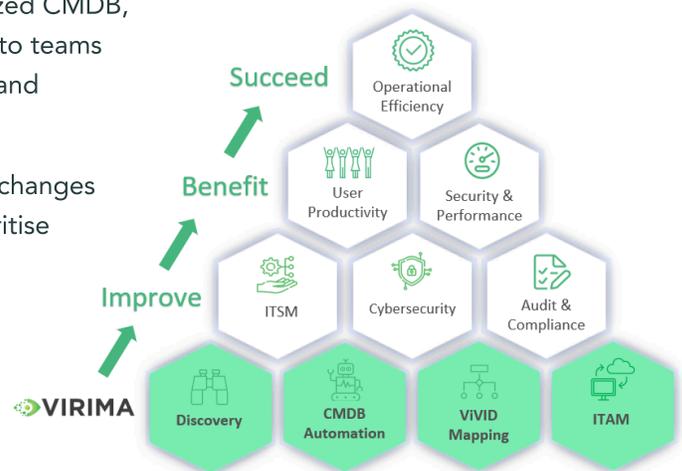

Virima Discovery

Automated CMDB discovery for hybrid IT

Using a multitude of agentless probes and API integrations, Virima Discovery automatically and repeatedly discovers and maps data center, network, edge, and cloud resources, visually revealing intricate asset interdependencies and communications.

Virima also offers optional agents for Windows, MacOS, and Linux as well as work-from-anywhere solution to report on any changes occurring while off-network.

Agentless Discovery

- Discovery Apps run on servers you control
- Credentials stay local, encrypted, and secure
- Over 140 extendable device and software probes
- API support for cloud, hypervisors and more
- Set and forget scan parameters and scheduling
- Detailed logs to ensure success and coverage
- Integration with IPAM and PAM solutions

Discovery Agent

- Optional for Windows, MacOS and Linux
- Flexible delivery and auto-update options
- Persistent monitoring of configuration changes and software usage
- Alternative for agentless discovery concerns (i.e. service accounts, remote command executions)
- Work-From-Anywhere device monitoring

Service Mapping Automation

Enjoy the full benefit of Virima's innovative Service Mapping that provides dynamic visual representations of business service dependencies, infrastructure relationships, application dependencies, network topologies, and system communications. Automatically generated from discovery data, these maps eliminate the guesswork of how your major applications, websites, and enterprise services function.

Virima Visual Impact Display (ViVID™)

With overlays of ITSM incident and change records, ViVID™ serves as a heads-up display and collaboration tool for unprecedented impact analysis to help improve MTBF and MTTR. Together with the overlaying of NVD vulnerability data to help set remediation priorities, ViVID™ answers questions like:

- What is the risk exposure to making this change?
- Who are the stakeholders to this change or incident?
- What recent change may be the root cause of this service outage?
- What services could be impacted by this open incident or alert?
- Which critical assets have vulnerabilities?
- Where are the weak links in my business services?
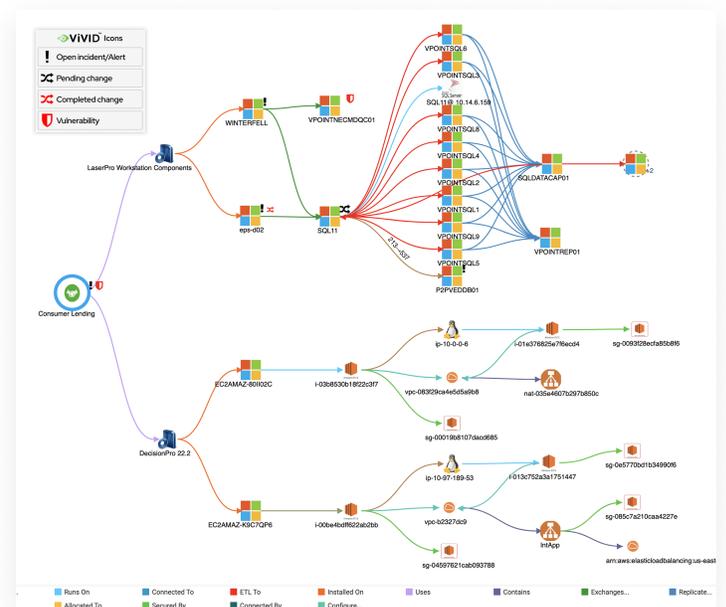

Autonomic Social Discovery™

Autonomic Social Discovery™ is an innovative feature that automates human intelligence gathering, providing a deeper understanding of your IT and cyber asset inventory that can't be learned through discovery.

- Human discovery for things like SLA's, contracts, ownership, status, EOL, policies
- Ensure CMDB and ITAM completeness
- Multi-channel task assignment
- Tasks can be easily assigned to others
- System adapts and learns who best to provide missing data
